

AMENDMENTS TO THE SPECIFICATION:

Page 3, replace the paragraph, beginning on line 10, with the following amended paragraph:

--With reference to **Figure 1**, a coil for a toroidally wound machine is manufactured as a series of bobbins which comprise two phase windings starting at 10, 11 and ending at 12, 13. For winding the coils are mounted on a rectangular former or a toroidal core 19 (Figure 3). The winder preferably has a multi-wire winding head and winds bobbins for each phase simultaneously.--
